

# Now What? Expectations for 2022 and Beyond

AWFS Webinar Chris Kuehl - Armada

September 2022

- Central banks starting to coalesce around the possibility as they raise rates higher and higher. Latest Fed statements are not encouraging.
  - High inflation numbers that provoke higher interest rates designed to cool demand. The major problem is that demand is not really the issue due to supply chain distortions.
  - Central banks acknowledge their limited ability to impact inflation with rate hikes as the core cause of the rise is still supply chain and energy prices. The impact of the stimulus efforts was significant in 2020 and early 2021 but much less so now.`
  - Q1 and Q2 were both in negative territory but Atlanta Fed is still predicting a tiny growth number for Q3 0.3% (down from 0.5%). A larger consensus look from economists is around 1.1%
  - Key determinant is usually the jobless rate and it is still close to historic lows 3.7%. Quit rate is still very high. Big layoff announcements still not common. Labor shortage situations have distorted normal layoff patterns however.
  - Strong dollar has affected exports and that contributes to slowdown as well.
  - Many indicators are not trending as negative right now but all are weaker than they were even a month or two ago.

## Latest CPI Still Hot, Directionally Improving Fast Enough?

- The headline inflation figure is 8.3%, core inflation came in at 6.3%.
- Demand destruction showing up in many of the figures, and energy improved but historically high.
- The CPI came in at 8.3% but the Fed's target rate is 2%. Even if we just look at core CPI, it was still well above the target rate at 6.3% (up from 5.9% last month).

### **Sticky and Flexible Price Consumer Price Index**

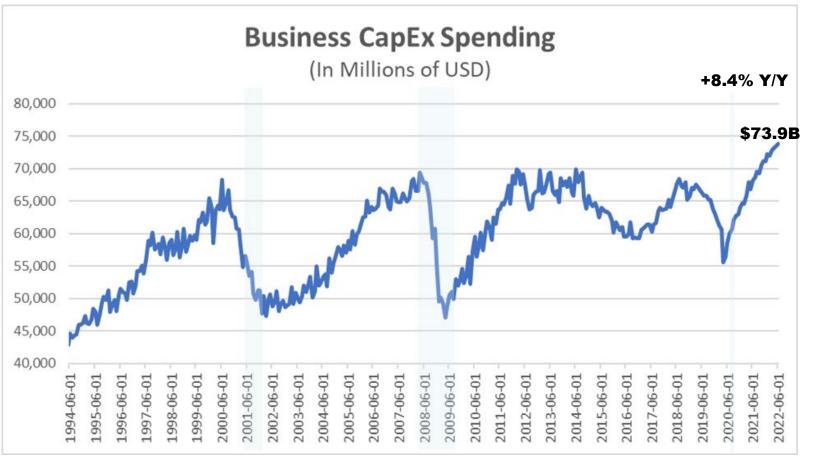

### **Demand: US Corporate Investment Stays Near Records**

- CapEx spending remained strong through the end of June and corporate investment was not yet showing signs of deceleration but surveys of corporate CEO's have indicated slowing of spending in the second half of the year.
- US Private investment driving:
  - Manufacturing (automation and robotics)
  - Construction of all types

12

Wholesale Trade (building inventories)

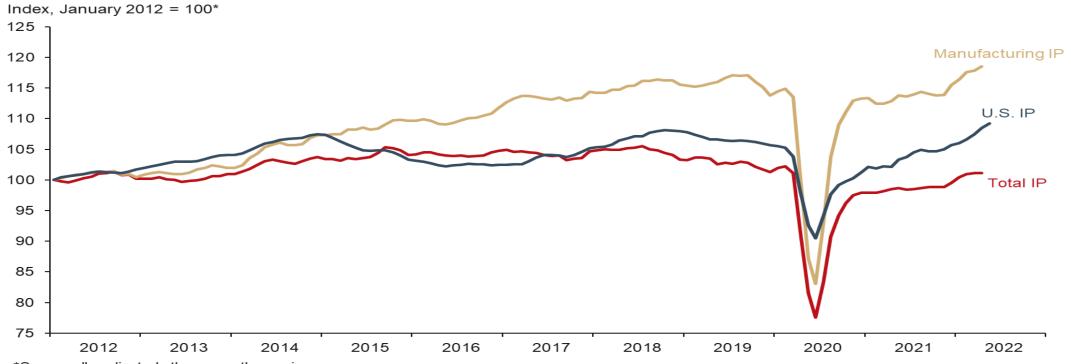

### **Demand: Global Manufacturing Activity Decelerating**

- 10 markets are now in contraction across the global manufacturing sector and all but three were decelerating month-over-month.
- In the services sector, which can account for as much as 70% of US GDP, the US fell sharply into contraction based.
- Europe is collectively planning a 15% reduction in energy consumption to get ready to weather tough winter conditions. First cuts typically come from heavy industry which is energy intensive. That could pull global manufacturing demand lower.

# Inventory to Sales Ratios Show Where Opportunity and Risk Is Highest

- There are two sections in the chart at right.
  - Automotive, retail, and merchant wholesalers are still understocked relative to 2019 levels. Only manufacturing, at a macro level, is now above 2019 levels. The second section shows microsectors and where the weakest inventory levels are
  - Discretionary sectors will face the toughest pressures in the second half of the year. Consumer staples will continue to reload inventories

	Inventory to Sales Ratio (ISR) Analysis						
	Sector	May 2019 ISR	May 2022 ISR	ISR Percent Above/Below 2019 Levels			
	Total Business	1.42	1.30	-8.5%			
1	Automotive	2.33		-77.4%			
2	Retail	1.48	1.20	-18.9%			
3	Merchant Wholesalers	1.35		-6.7%

### September 2022

### **Good News: Construction Still Showing Solid Performance...**

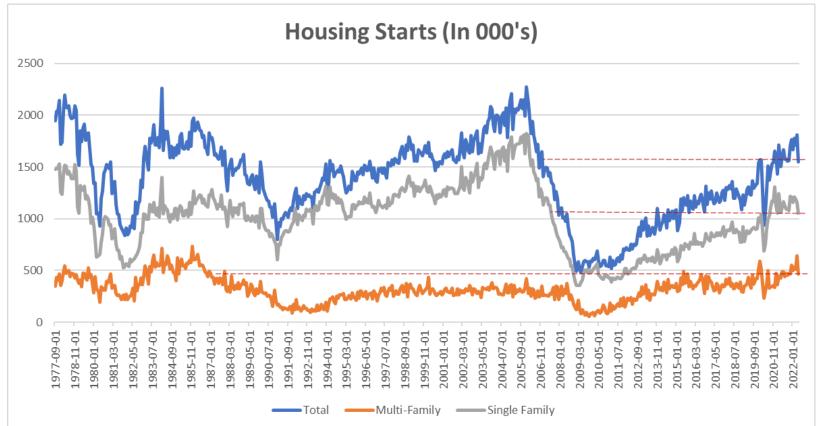

\$932B (June)

2022:

### **Housing Sector Showing Segments of Weakness**

- Multi-family starts arguably the strongest since the 1980's.
- Mortgage applications are down 18% Y/Y and refinance applications are down 80%.
- The MBA average home purchase price was \$460,000 in March, it has fallen to \$415,000. 25% of households that could afford the median-priced home could not afford it today.
- Zillow reported 15% of homes that went under contract in June had purchase agreements that failed. Inventories are rising.

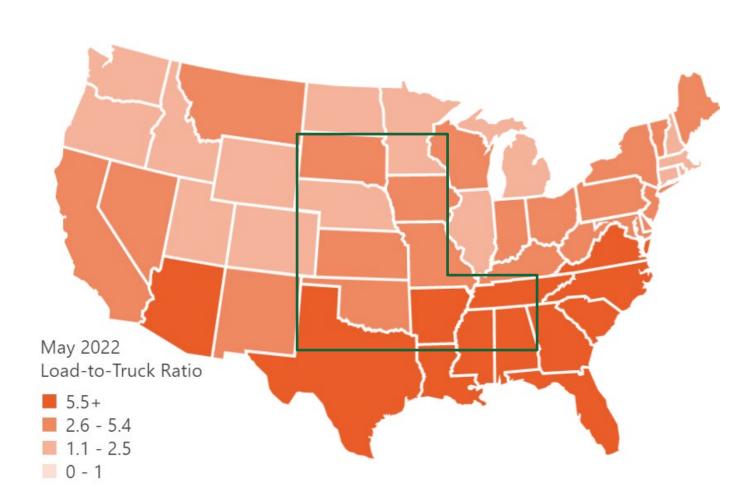

Every newly constructed home requires 7 full truckloads of fixtures and the housing market can account for as much as 11-16% of GDP in any given year.

### **Good News: Reshoring**

- 68% of Global supply chain managers rethinking entire supply chain
- "Friend Shoring" the big trend
- Have to fight water and electricity problems west and south, tax issues north and northeast, and distribution problems and cost southeast.
- The Midwest is prime, energy, lower cost of living, water access, distribution

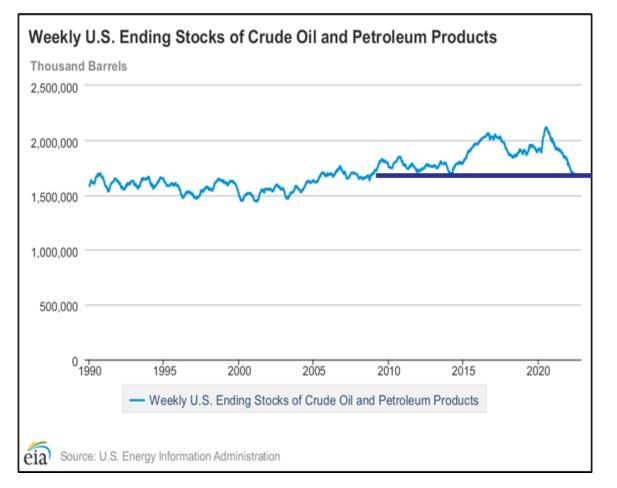

# Shift to more Reshoring and Nearshoring? \$1 trillion to be invested in expanding manufacturing capacity in the US.

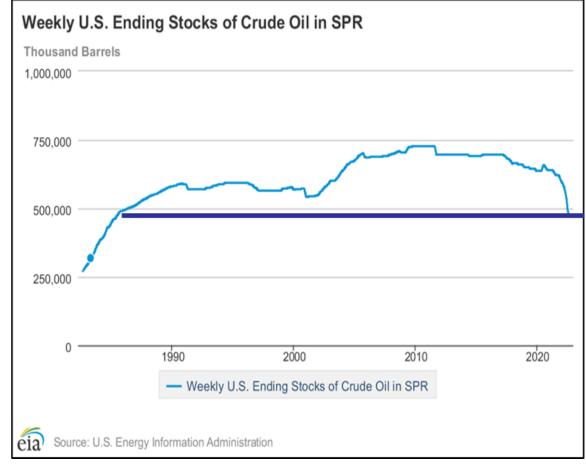

- Some projects that were put on hold will start once commodity prices and availability of those products improves (timed for Q1/Q2)
- Some concern about the Inflation Reduction Act and manufacturing. Some companies are already having to war game the differences between a 15% minimum tax and where they produce products.

### Putin Able to Outlast Global Efforts to Offset Sanctions? US Still Depleting SPR at the Rate of 1M BPD and Exporting Record Volumes.

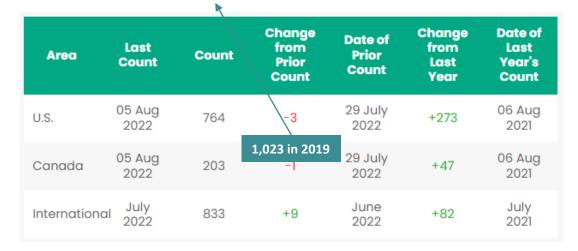

### **EIA Is Still "All Over the Place" On It's Outlook**

Crude forecast:	Gasoline forecast:	Diesel forecast:
• 2021 \$68.21	• 2021 \$3.02	• 2021 \$3.29
• 2022 \$98.79	• 2022 \$4.05	• 2022 \$4.73
• 2023 \$89.75	• 2023 \$3.57	• 2023 \$4.07

- US production will hit an all-time high next year of 13M barrels per day
- But, with commuter traffic cut off, consumption is 20M
  B/D currently
- The 7M BPD gap must be closed by someone else, Canada can fill 1.5M
- The US will start rebuilding the SPR in 2023 and 2024

### Import Demand: the US Dollar Continues to Gain Strength, Importing Will Continue to be Robust

- Risk: the developing world can't afford to purchase food, energy, etc. <u>Anything denominated in</u> <u>dollars</u>.
- Even Europe is struggling.
- This could eventually become a headwind, but for now it remains a tailwind for US importers.
